Aquarion Water Company Announces Infrastructure Improvement Project in Stamford

Laurel Raw Water Main Replacement Project Scheduled to Begin in January 2014

BRIDGEPORT, CONN. – December 30, 2013 – Aquarion Water Company today announced an infrastructure improvement project in Stamford, Connecticut. In early January 2014, Aquarion will begin the process to replace a section of a water main feeding the Stamford Treatment Plant.

An estimated 3,700 feet of 42-inch diameter main will be replaced by April 2014, with additional sections of main expected to be replaced in future years. The project is designed to improve the long term reliability and capacity of Stamford's water infrastructure.

Due to the fact that Aquarion maintains redundant infrastructure serving the Stamford Treatment Plant, customers should experience no change in water service during the project. In the unlikely event of complications associated with this project, Aquarion will provide impacted customers with updated information.

Customers with project-related questions may contact George Logan, Aquarion's Director of Engineering and planning at (203-337-5902). For service or water-related issues, please contact Aquarion Customer Service at 1-800-732-9678.

About Aquarion Water Company:

Aquarion Water Company is the public water supply company for more than 625,000 people in 47 cities and towns throughout Connecticut, as well as serving customers in Massachusetts and New Hampshire. It is the largest investor-owned water utility in New England and among the seven largest in the U.S. Based in Bridgeport, Conn., it has been in the public water supply business since 1857. Across its operations, Aquarion strives to act as a responsible steward of the environment and to assist the communities it serves in promoting sustainable practices.
